

Biodegradable Resin for Injection Molding Manufacturing

GS CNF PLA for Injection

Nano Cellulose + PLA (Poly Lactic Acid) Composite Material

(100% Nature derived Material, no petroleum)

No. 1138

No. 359

**Certification of GreenPla and BiomassPla by JBPA
(Japan BioPlastic Association)**

Normally, it is difficult to use PLA (Poly Lactic Acid) for injection molding for mass production. However, with our material technology, we made it possible to use our PLA and nano cellulose based material for mass production with normal injection machines. And this PLA based resin is composed of 100 % nature biomass based material, no petroleum.
